CITY OF TORONTO STAFF BRIEFING

Green P into affordable housing.

A short internal deck to help colleagues get on side.

Heal House is asking the City to support a pathway for the Green P parcel to become part of a broader affordable housing and community-wellness solution, delivered with a non-profit partner and clear public-benefit protections.

THE OPPORTUNITY

A parking parcel can unlock a deeper civic outcome.

The Green P lands sit inside a larger Lakeshore opportunity. On their own, they serve a narrow civic function. As part of the Heal House assembly, they can become affordable housing, wellness infrastructure, and a permanent neighbourhood benefit.

Today: limited use as a standalone municipal parcel.

Unlocked: part of a complete site plan with housing and services.

Outcome: public land value converted into visible community benefit.

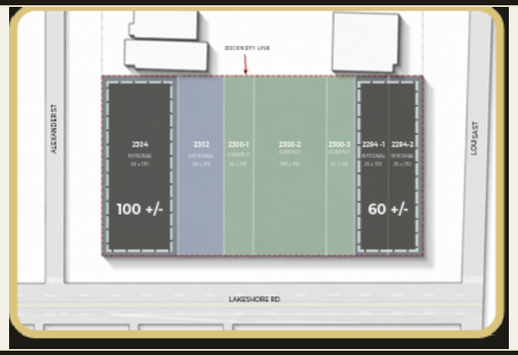
AVAILABLE SITE PATHS

Three options are available to Heal House.

The City does not need to evaluate a financial model to understand the choice. The question is which site path produces the strongest affordable housing and community-benefit outcome. Remaining unit counts to be confirmed.

OPTION ONE

01
Build the two corner lots



Affordable housing: 0%

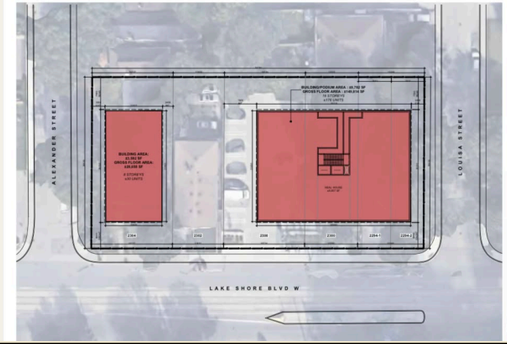
Total units: placeholder — to be confirmed

Affordable units: 0

Heal House proceeds on the two corner parcels only. This is the baseline path, but it leaves the Green P public-benefit opportunity largely unrealized.

OPTION TWO

02
Corner lot + Green P + one lot



Affordable housing: 20%

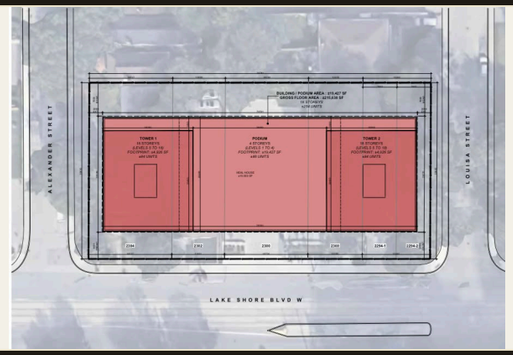
Total units: placeholder — to be confirmed

Affordable units: 53

A City-supported Green P pathway creates a stronger housing plan, a better neighbourhood edge, and a clearer public-benefit story.

OPTION THREE · PREFERRED

03
Assemble the entire block



Affordable housing: 30%

Total units: 254

Affordable units: 77

The complete-site vision: the full block becomes one coordinated affordable housing, wellness, and community-serving destination.

THE PROPOSAL

Heal House secures Green P. The City secures affordable housing outcomes.

This is a public-benefit proposal. The Green P transfer, sale, or land-swap-equivalent should be structured around the affordable housing outcome Toronto wants delivered — with Heal House assembling the site and a non-profit partner stewarding affordability.

HOUSING-FIRST FRAMING | GREEN P PATHWAY | NON-PROFIT DELIVERY | CITY PUBLIC BENEFIT

WHY IT FITS TORONTO

The City gets mission-aligned housing without becoming the developer.

Toronto priorities

More affordable homes, public land value converted into public benefit, and community-serving uses at grade.

Heal House role

Lead the site vision, coordinate the land pathway, and partner with a non-profit to deliver affordability.

THE LAND EXCHANGE LOGIC

A land swap in spirit: public land value exchanged for affordable housing delivery.

> The City can treat Green P as a public-benefit lever. Rather than viewing the parcel only as a parking asset, staff can frame it as a contribution toward affordable housing, wellness services, and a stronger complete-community outcome.

City

Defines the land pathway and public-benefit conditions.

Heal House

Secures the parcel and integrates it into the complete-site plan.

Non-profit

Delivers and stewards the affordable housing commitment.

The City can make land available without losing accountability.

Possible safeguards

- Affordable housing covenant registered against the project.
- Non-profit role documented in the delivery structure.
- Public-benefit reporting back to the City.
- Milestones tied to planning and delivery progress.

What this avoids

- No City operating burden.
- No complicated ownership partnership.
- No unnecessary complexity in the first conversation.
- No dilution of the core public outcome.

THE SHORT STORY

Toronto can turn a parking parcel into affordable housing by letting Heal House secure Green P, integrate it into the complete site, and deliver affordability through a non-profit partner.
