CITY OF TORONTO STAFF BRIEFING

Green P into affordable housing.

A short briefing deck for internal City review.

Heal House is asking the City to support a pathway for the Green P parcel to become part of a broader affordable housing and community-wellness solution, delivered with a non-profit partner and clear public-benefit protections.

THE OPPORTUNITY

A parking parcel can unlock a deeper civic outcome.

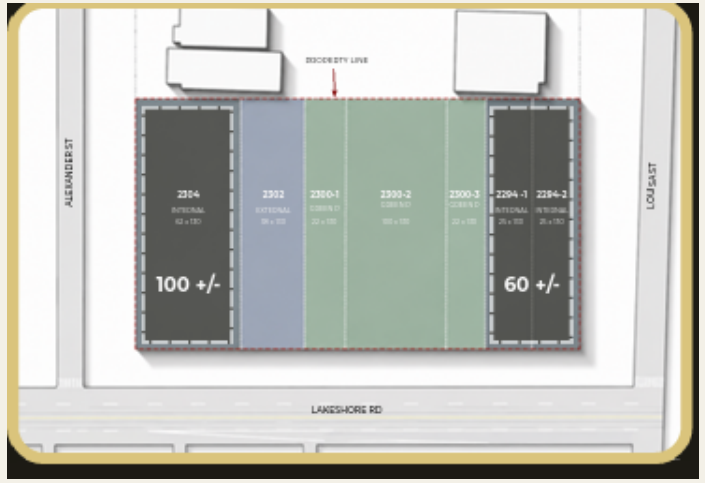
The Green P lands sit inside a larger Lakeshore opportunity. On their own, they serve a narrow civic function. As part of the Heal House assembly, they can become affordable housing, wellness infrastructure, and a permanent neighbourhood benefit.

OPTION ONE

Two corner lots

Baseline path using the two corner parcels only.

AFFORDABLE HOUSING	0%
TOTAL UNITS	TBD
AFFORDABLE UNITS	0

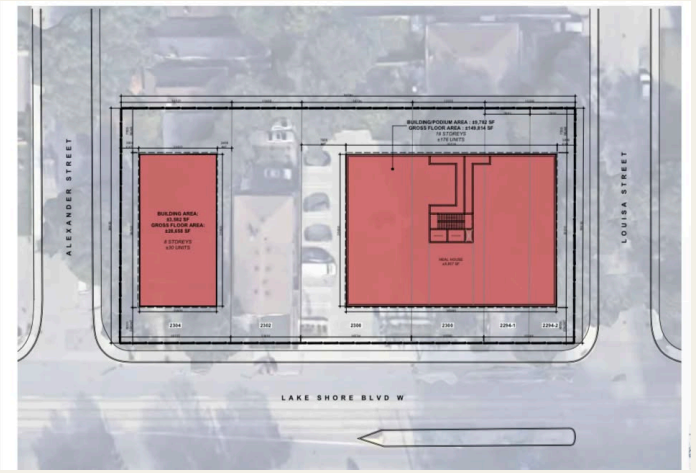


OPTION TWO

Partial assembly with Green P

Green P is integrated into a stronger affordable housing and community-benefit path.

AFFORDABLE HOUSING	20%
TOTAL UNITS	206
AFFORDABLE UNITS	42

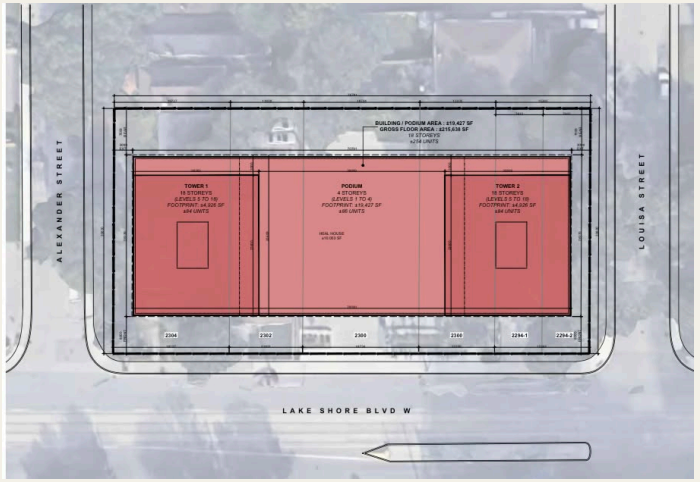


OPTION THREE · HIGHEST PUBLIC-BENEFIT SCENARIO

Full block assembly

The complete-site scenario produces the clearest measurable affordable housing outcome.

AFFORDABLE HOUSING	30%
TOTAL UNITS	254
AFFORDABLE UNITS	77



THE PROPOSAL

A Green P pathway can convert public land value into measurable affordable housing outcomes.

This is a public-benefit proposal. The Green P transfer, lease, disposition, or partnership pathway should be evaluated through the affordable housing outcome Toronto wants delivered — with Heal House assembling the site and a non-profit partner stewarding affordability.

HOUSING-FIRST FRAMING | GREEN P PATHWAY | NON-PROFIT DELIVERY | CITY PUBLIC BENEFIT

> This briefing does not ask staff to pre-approve a transaction. It asks staff to identify the appropriate City pathway for evaluating whether Green P can be converted into a measurable affordable housing and community-benefit outcome.

WHY IT FITS TORONTO

The City gets mission-aligned housing without becoming the developer.

Toronto priorities

More affordable homes, stronger long-term property-tax revenue, public land value converted into public benefit, and community-

Heal House role

Lead the site vision, coordinate the land pathway, and partner with a non-profit to deliver affordability.

THE LAND EXCHANGE LOGIC

A public-benefit land transaction: public land value converted into affordable housing delivery.

> The City can treat Green P as both a public-benefit and revenue lever. Rather than viewing the parcel only as a parking asset, staff can evaluate the appropriate process for converting underused land into affordable housing, wellness services, long-term tax generation, and a stronger complete-community outcome.

City

Defines the land pathway and public-benefit conditions.

Heal House

Secures the parcel and integrates it into the complete-site plan.

Non-profit

Delivers and stewards the affordable housing commitment.

LAND VALUE → PUBLIC BENEFIT

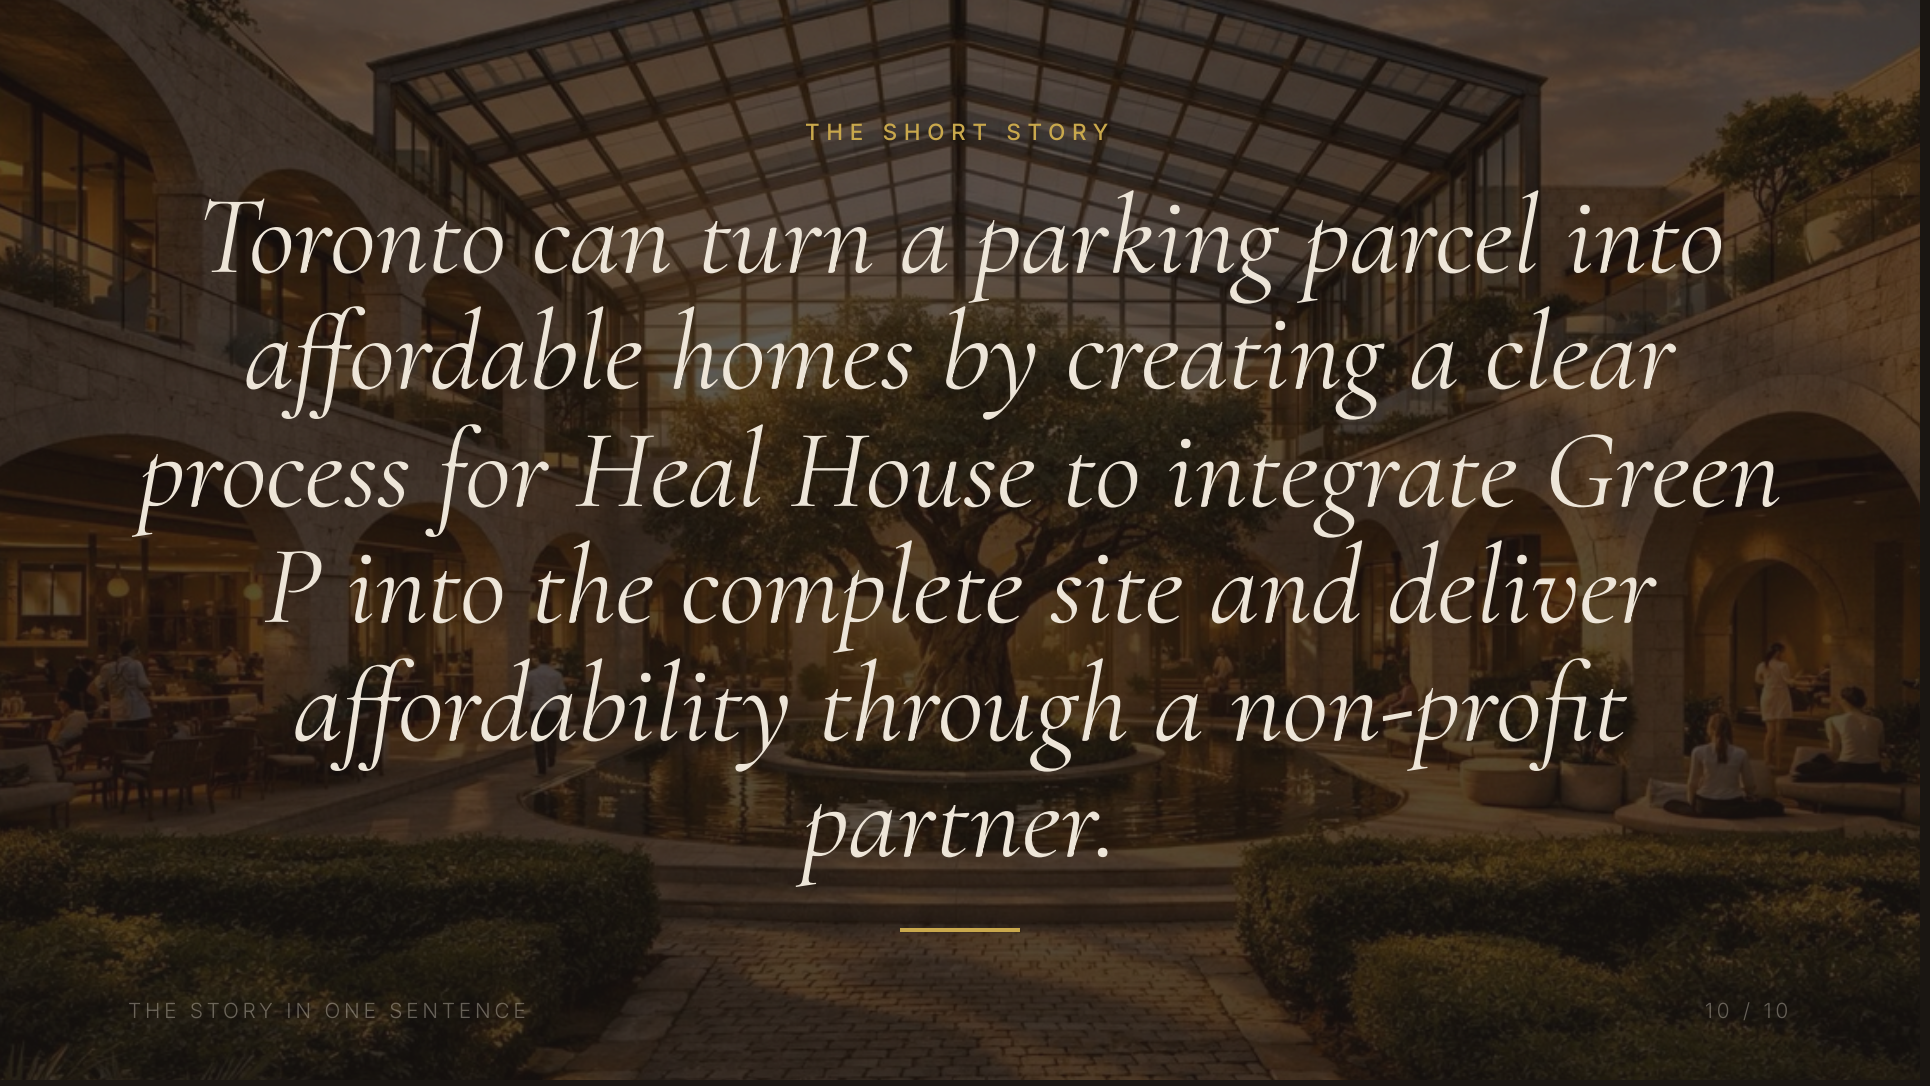
The City can make land available without losing accountability.

Possible safeguards

- Affordable housing covenant registered against the project.
- Non-profit role documented in the delivery structure.
- Public-benefit reporting back to the City.
- Milestones tied to planning and delivery progress.

What this avoids

- No City operating burden.
- No complicated ownership partnership.
- No unnecessary complexity in the first conversation.
- No dilution of the core public outcome.



THE SHORT STORY

Toronto can turn a parking parcel into affordable homes by creating a clear process for Heal House to integrate Green P into the complete site and deliver affordability through a non-profit partner.
